SUMMARY

Mobile engineer with 4+ years of experience building and shipping Android apps in Kotlin and Jetpack Compose, including consumer apps with 100K+ downloads and real-time Android TV features serving 10,000+ concurrent users. Comfortable across the stack: backend services in Node.js, MongoDB and PostgreSQL, payment flows, and AI features built on LLM APIs and MCP.

TECHNICAL SKILLS

Android: Android SDK, Jetpack Compose, Compose for TV (Android TV), Kotlin Multiplatform (KMP), Compose Multiplatform (CMP), Coroutines/Flow, Dagger-Hilt, Room, LiveData, WorkManager, Retrofit, Firebase (Remote Config, FCM, Auth), Google Maps SDK
Architecture & Integrations: MVVM, Clean Architecture, Multi-module Architecture, Real-time Event-driven Systems, WebSockets/Socket.IO, REST APIs, Payment Integration (Razorpay), Webhooks, LLM Integration (Gemini API), MCP (Model Context Protocol)
Frontend/Backend: React, React Native, Next.js, Node.js, Express, MongoDB, PostgreSQL
Languages: Kotlin, Java, JavaScript, TypeScript
Testing & Performance: JUnit, Android Profiler, LeakCanary, Baseline Profiles, Firebase Crashlytics & Performance
Tools & Practices: Android Studio, Git, GitHub, GitHub Actions (CI/CD), Gradle, ADB, A/B Testing, Agile/Scrum

EXPERIENCE

Origin Fresh **01/2026 – Present**
Senior Software Engineer Bengaluru, India

- Develop and ship the company's consumer Android apps (Kotlin, Jetpack Compose, Room, WorkManager, Google Maps SDK) on Google Play: **Wholesale Mandi** (**100K+ downloads**, 4.1/5 from nearly 7K reviews) and **Origin Fresh** (**10K+ downloads**, 4.4/5), serving fresh-produce customers across Bengaluru and Chennai.
- Improved app startup time by **~70%** with Baseline Profiles and memory-leak fixes found with LeakCanary, and cut the Origin Fresh app's size from **40 MB to 17 MB (~58% smaller)**.
- Cut checkout time for large orders from **6–10 minutes to under 5 minutes** per customer in the in-store POS app used by store staff, by adding barcode scanning (items scan straight into the cart instead of being searched for) and paginating the product catalog.
- Built an AI recipe generator in the Origin Fresh app with the Google Gemini API: customers enter the items they have and get a recipe in-app.
- Integrated Razorpay payments with webhook-driven payment confirmation, keeping order and payment status reliable end to end.
- Set up feature flags and dynamic routing with Firebase Remote Config to A/B test rollouts and ship business-critical changes without waiting on app-store updates.

Circuit House Technologies **09/2024 – 12/2025**
Software Engineer Bengaluru, India

- Built and shipped **TLDR** by LumioLabs (**50K+ downloads** on Google Play), a content discovery app that unifies movies, shows, music, and live sports from multiple platforms with cross-platform search and curated recommendations.
- Built real-time Android TV features in Jetpack Compose with bidirectional WebSocket communication over Socket.IO, serving **10,000+ concurrent users**.
- Built a phone-to-TV launch flow using Firebase Cloud Messaging (FCM), letting users start content on Android TV directly from their phone.
- Set up GitHub Actions CI/CD for staging and production, cutting manual build and deployment time by 50%.
- Fixed a first-launch race condition in concurrent microservice calls by guarding service initialization with a Kotlin Coroutines Mutex, so it runs exactly once and dependent calls wait for it.

WeDoApps **08/2023 – 08/2024**
Android Developer Remote

- Built and shipped a live cricket scores app on Google Play (**50K+ downloads**, 4.2/5 from 500+ reviews) with ball-by-ball commentary, live scorecards, match schedules, and points tables.
- Designed and built backend services in Node.js and MongoDB, and consumed them in the Android app through REST APIs with Retrofit and Coroutines, with Room for local storage and WorkManager for background work.
- Implemented Firebase Authentication for sign-in, FCM push notifications for re-engagement, and analytics event tracking.
- Worked with Product, Design, and QA to define UI regression test plans run before every production release.

Full Creative **09/2022 – 08/2023**
Jr. Software Engineer Remote

- Worked on three Android apps built from one shared multi-module codebase: **anywhere.app** (**10K+ downloads**, 4.3/5), a team chat, file-sharing, and video-calling app; **AnswerConnect** (**10K+ downloads**, 4.3/5), for managing a 24/7 virtual answering service and tracking leads; and **WellReceived**, a HIPAA-compliant patient messaging app for medical practices.
- Migrated high-traffic user flows from legacy Views to Jetpack Compose in the shared modules, so all three apps got the new UI from a single change and state management became simpler.
- Fixed Firebase Cloud Messaging notification delivery and in-app dialer bugs across the apps.
- Profiled and refactored the shared modules, fixing memory leaks and improving cold-start time.

OPEN SOURCE & PROJECTS

***Dossier* (Open-Source Contributor, v1.9.0)** **10/2026**

- Contributed two headline features to Dossier, a self-hosted AI job-search app (TypeScript, Next.js, PostgreSQL); both were adopted upstream from my fork and shipped in v1.9.0 with credit.
- Built the **Claude connector**, letting Claude search jobs, score postings against a user's profile, read applications, and save tailored resume/cover-letter drafts, while keeping contact details and notes private.
- Built **Startups** discovery: aggregates YC job posts and Hacker News "Who is hiring?" listings, filters by city, country, and remote eligibility, ranks each against the profile, and extracts published application addresses while honoring robots.txt.

EDUCATION

PES University, Bangalore **10/2022 – 06/2024**
MCA (Master's of Computer Applications) CGPA - 8.14/10

Lachoo Memorial College, Jodhpur **07/2018 – 08/2021**
BCA (Bachelor's of Computer Applications) CGPA - 7.7/10
