SUMMARY

Performance-driven Mobile Engineer with 4+ years of experience designing scalable, offline-first mobile systems using Kotlin, Jetpack Compose, React Native, and modern architecture components. Specialized in high-throughput real-time architectures (WebSockets), robust dependency injection, and building full-stack mobile data pipelines (Node.js/MongoDB) to optimize application latency and end-to-end performance.

TECHNICAL SKILLS

Android: Android SDK, Jetpack Compose, Compose for TV (Android TV), Coroutines/Flow, Dagger-Hilt, Room, LiveData, WorkManager, Retrofit, Firebase (Remote Config, FCM, Auth), Google Maps SDK
Architecture & Integrations: MVVM, Clean Architecture, Multi-module Architecture, Real-time Event-driven Systems, WebSockets/Socket.IO, REST APIs, Payment Integration (Razorpay), Webhooks, On-device AI Integration, MCP (Model Context Protocol)
Frontend/Backend: React, React Native, Next.js, Node.js, Express, MongoDB, PostgreSQL
Languages: Kotlin, Java, JavaScript, TypeScript
Testing & Performance: JUnit, Android Profiler, LeakCanary, Baseline Profiles, Firebase Crashlytics & Performance
Tools & Practices: Android Studio, Git, GitHub, GitHub Actions (CI/CD), Gradle, ADB, A/B Testing, Agile/Scrum

EXPERIENCE

Origin Fresh **01/2026 – Present**
Senior Software Engineer Bengaluru, India

- Develop and ship the company's consumer Android apps on Google Play: **Wholesale Mandi** (**1L+ downloads**, 4.1/5 from nearly 7K reviews) and **Origin Fresh** (**10K+ downloads**, 4.4/5 rating), serving fresh-produce customers across Bengaluru and Chennai.
- Engineered and scaled multiple high-performance native Android consumer and POS applications, owning mobile application architecture with MVVM and strict Dagger-Hilt dependency injection.
- Spearheaded the modular migration of legacy XML UIs to Jetpack Compose, accelerating feature delivery velocity by 35% and maintaining absolute design system consistency.
- Built an AI recipe generator in the Origin Fresh app with Google Gemini APIs: customers enter the items they have and get a recipe in-app.
- Integrated Razorpay payments with webhook-driven payment confirmation flows for reliable order and payment status updates.
- Architected dynamic application routing and runtime feature flags leveraging Firebase Remote Config to run A/B tests on feature rollouts, minimizing app-store update cycles for critical business feature rollouts.

Circuit House Technologies **09/2024 – 12/2025**
Software Engineer Bengaluru, India

- Built and shipped **TLDR** by LumioLabs (**50K+ downloads** on Google Play), a content discovery app that unifies movies, shows, music, and live sports from multiple platforms with cross-platform search and curated recommendations.
- Developed and deployed real-time, event-driven Android TV features using Jetpack Compose, integrating bi-directional WebSocket communication via Socket.IO for 10,000+ active concurrent users.
- Built a phone-to-TV launch flow using Firebase Cloud Messaging (FCM), letting users start content on Android TV directly from their mobile phone.
- Orchestrated automated CI/CD pipelines via GitHub Actions, reducing manual build and deployment times to staging/production environments by 50%.
- Eliminated a critical multi-threading race condition by implementing state management driven by Kotlin Coroutines/Flow with asynchronous cold Flows.

WeDoApps **08/2023 – 08/2024**
Android Developer Remote

- Built full-stack mobile capabilities by designing scalable backend services (Node.js + MongoDB) consumed through REST API integrations engineered with Retrofit and Coroutines.
- Implemented robust security and user retention models utilizing Firebase Authentication, Firebase Cloud Messaging (FCM), and localized Analytics frameworks.
- Conducted comprehensive cross-functional reviews with Product, Design, and QA teams to establish stringent UI regression test plans, ensuring zero-defect production deployments.

Full Creative **09/2022 – 08/2023**
Jr. Software Engineer Remote

- Optimized complex multi-module Android codebases, executing memory leak isolation, performance tuning, and structural refactoring that enhanced application cold-start times.
- Transitioned highly trafficked user workflows from legacy view layers to Jetpack Compose components, drastically simplifying state management overhead.

OPEN SOURCE & PROJECTS

***Dossier* (Open-Source Contributor, v1.9.0)** **10/2026**

- Contributed two headline features to Dossier, a self-hosted AI job-search app (TypeScript, Next.js, PostgreSQL); both shipped in the v1.9.0 release from my fork.
- Built the **Claude connector**, letting Claude search jobs, score postings against a user's profile, read applications, and save tailored resume/cover-letter drafts, while keeping contact details and notes private.
- Built **Startups** discovery: aggregates YC job posts and Hacker News "Who is hiring?" listings, filters by city, country, and remote eligibility, ranks each against the profile, and extracts published application addresses while honoring robots.txt.

***EHO-Partner App* (Freelance Project)** **01/2022 – 03/2022**

- Developed a highly available Android client for emergency services dispatch tracking location telemetry via Google Maps SDK.
- Built an uninterruptible offline-first sync mechanism using Room Database and persistent WorkManager tasks, preventing data loss during critical cellular dropouts.
- Integrated low-latency real-time emergency broadcast updates via WebSockets alongside secure native payment processing through Razorpay.

EDUCATION

PES University, Bangalore **10/2022 – 06/2024**
MCA (Master's of Computer Applications) CGPA - 8.14/10

Lachoo Memorial College, Jodhpur **07/2018 – 08/2021**
BCA (Bachelor's of Computer Applications) CGPA - 7.7/10
